Automotive connectivity hub
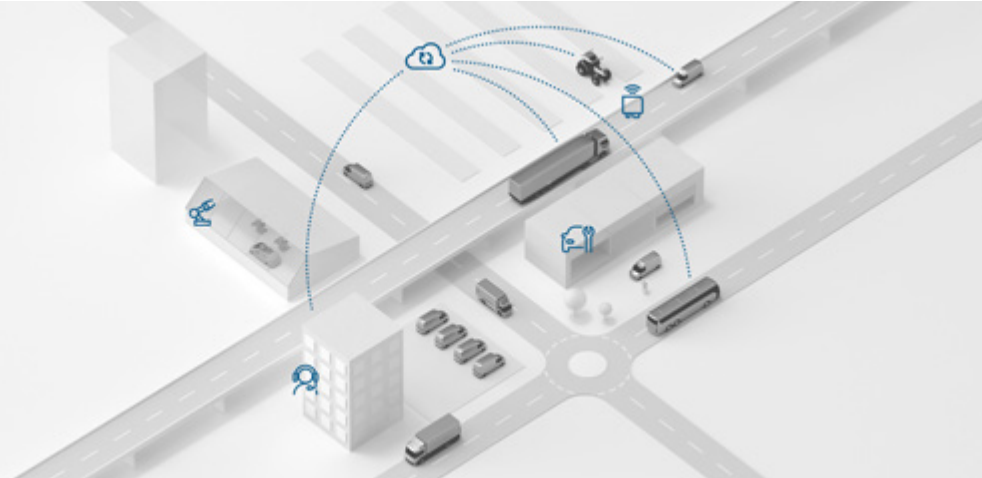

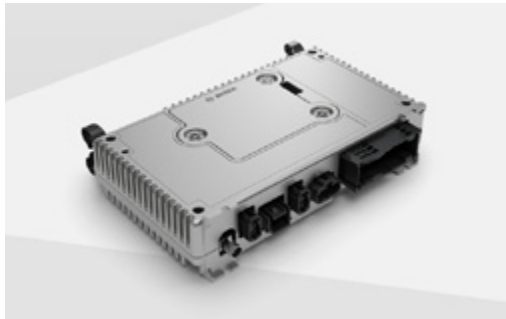

Independent connectivity solution for standardized
data exchange between vehicle, cloud and services

Powertrain and
electrified mobility

- Independent plug-and-play connectivity solution for vehicles of different makes
  with straightforward integration into development and production
- Configurable selection of standardized, high-quality vehicle data via the cloud
- A single solution supports a wide range of data-based services from Bosch and
  third-party providers
- Comprehensive device management with regular feature and security updates over
  the air

Retrofittable

**in vehicles from different manufacturers
without the need for vehicle modifications**

Plug
and play

**for simple integration into the development
process of vehicle manufacturers**
